

INSTALLATION INSTRUCTIONS

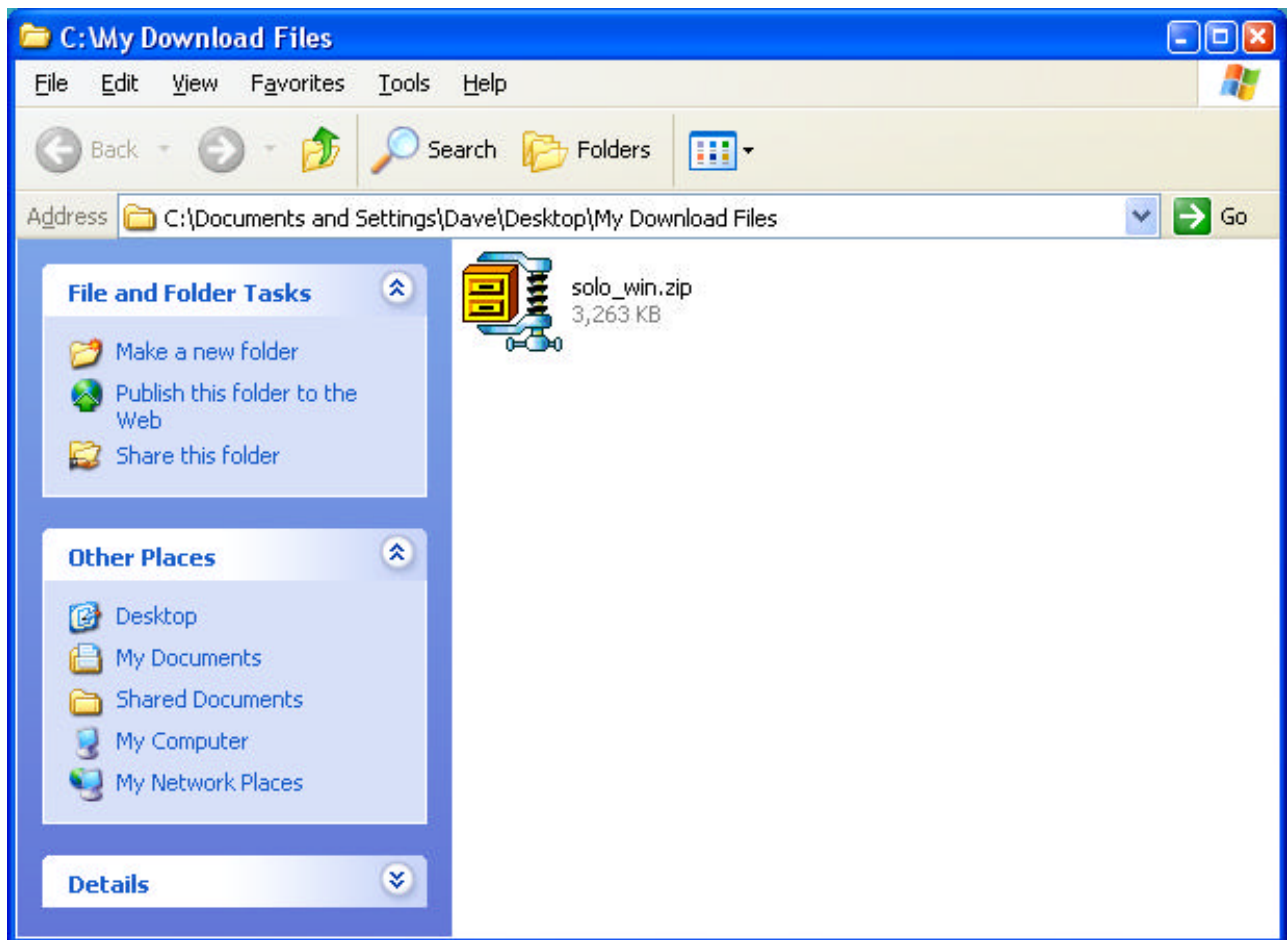

1. Introduction

This guide gives brief instructions on how to install your new AMG product.

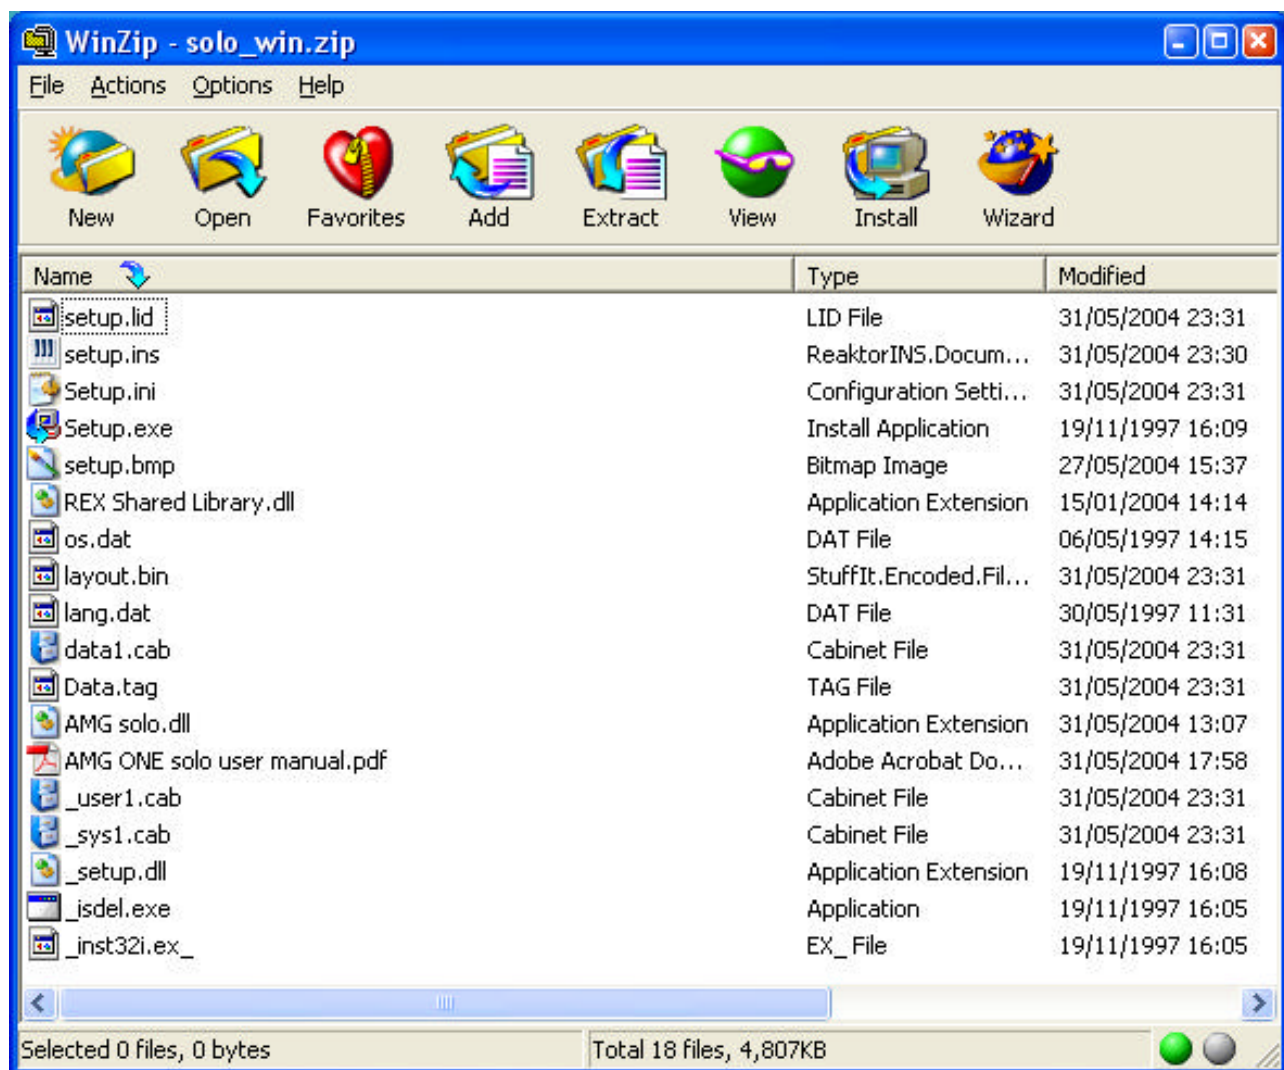

2. The Zip File

All AMG VSTi products are distributed online in compressed form to conserve disk space and bandwidth. To decompress your product file you will need a piece of software called "WinZip". You can download the latest version of WinZip from www.winzip.com

Once you have installed WinZip, open your product archive by double-clicking on it.

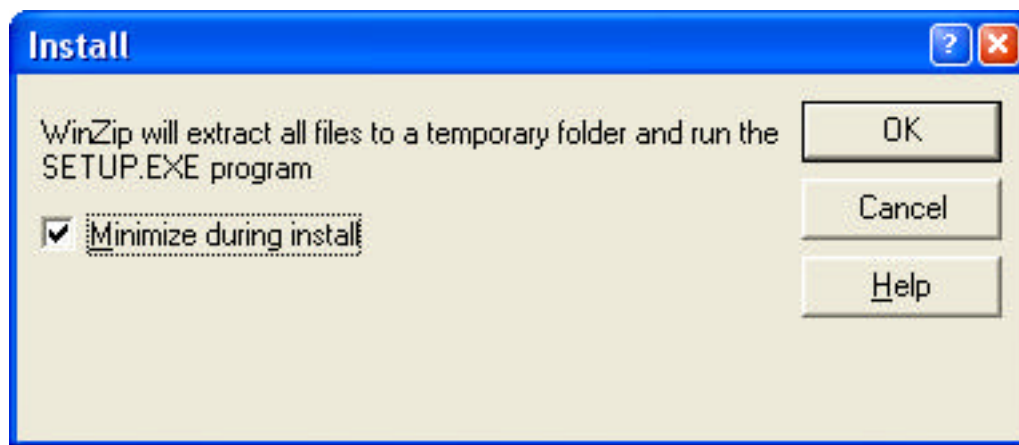

WinZip will automatically display a list of the files contained in the compressed archive:

Double-click on the file labelled "Setup.exe" to run the installation program.

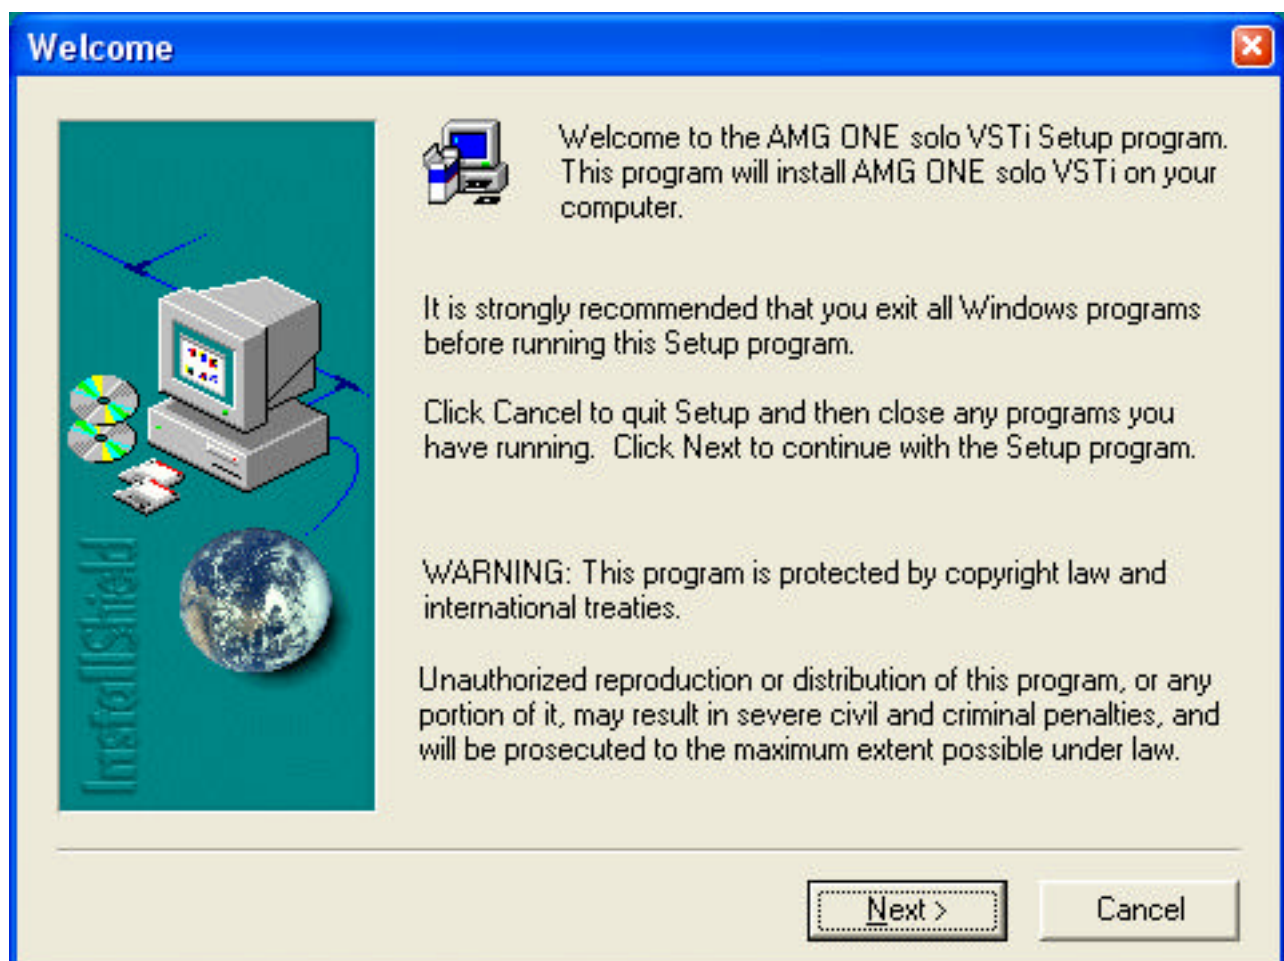

3. Extracting the Setup Files

Before the installation program runs, WinZip will display the following prompt:

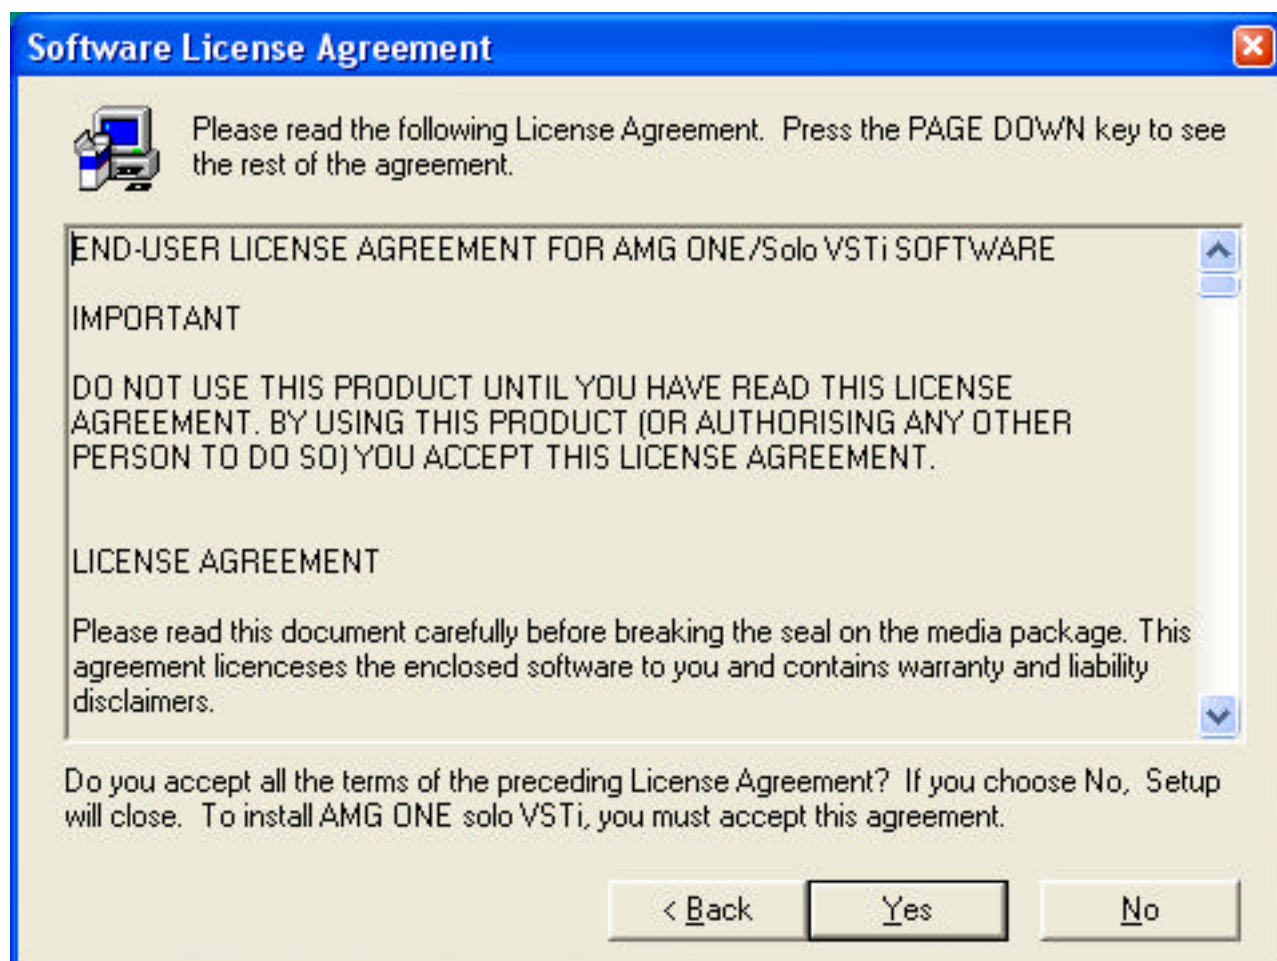

Click "OK" to proceed. WinZip will then proceed to extract the files necessary for the installation into a temporary directory on your hard-drive. This directory is deleted when the installation completes.

4. The Installation Program

After the essential setup files have finished extracting, the Installation Program will commence. On screen, you will see a simple Wizard dialog box, with controls labelled "back", "next" and "cancel". The Wizard will guide you through the installation process in step. You should click on the "next" button whenever you are ready to proceed, or the "back" button if you wish to change an option. The "Cancel" button aborts the installation.

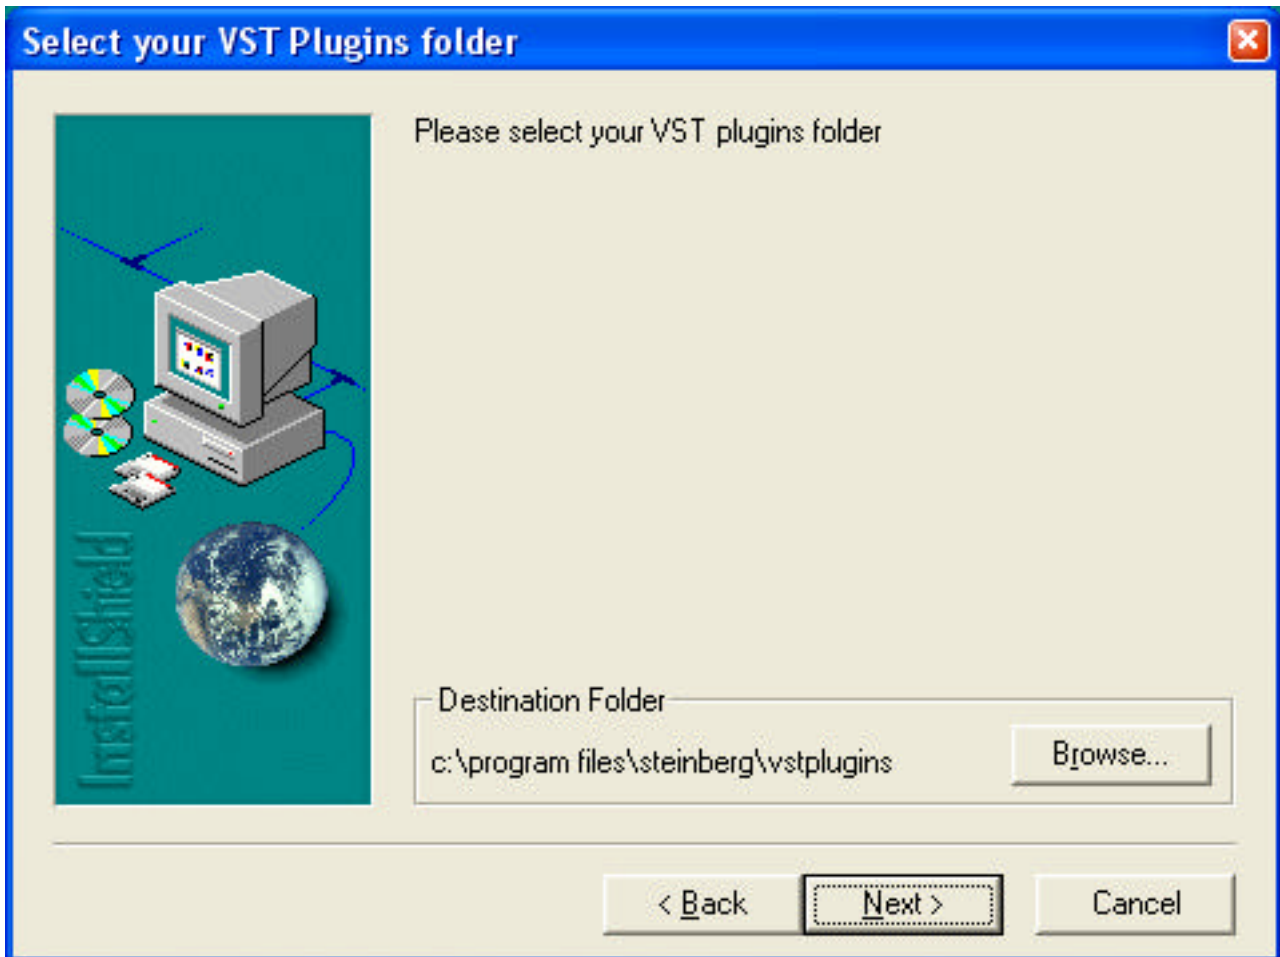

5. The License Agreement

Usage of any AMG software product is subject to the acceptance of a license agreement. Click "Yes" to indicate that you have read, understood and agree to be bound by the terms of the license agreement.

6. Selecting your Installation Directory

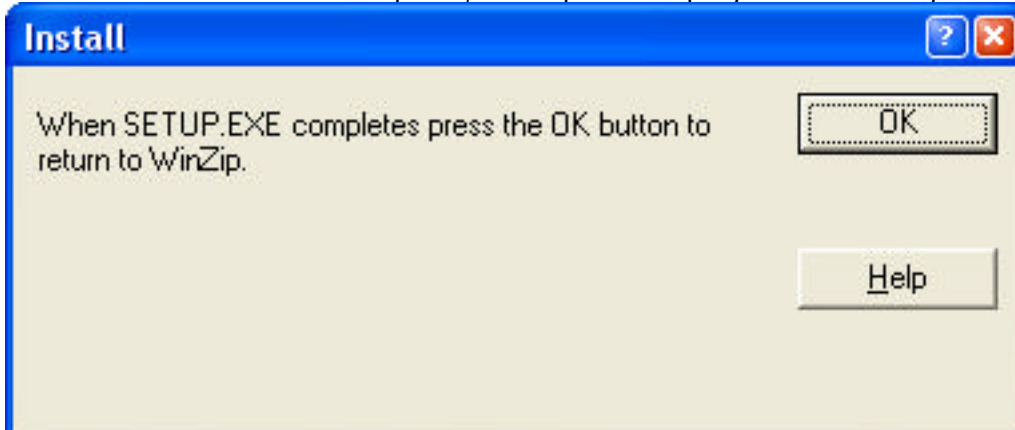

The install program will scan your registry and in most cases work out the correct directory to install your product automatically. VSTi version users with multiple host programs, you should install the VST DLL to their main host, and copy it from the Muon Software folder Ltd to your other hosts manually afterwards. DXi installers will also automatically install the VSTi version into the correct place should it ever be needed.

Setup will then complete, and return you to WinZip.

7. Cleaning Up

Once the installation is complete, WinZip will display the following dialog:

Click "OK" to complete the installation process.
